PATIENT-LEVEL REPORTING
The intent of the patient level report is to provide detailed measure results to allow for the hospital to validate the process used to abstract the MMIS data and to calculate results. Not all data in the Patient Level Reports (PLR) is viewable by the hospital.

In accordance with HIPAA guidelines 45 CFR 160, services not provided by the hospital of report is considered as protected Health Information (PHI) and therefore the data is hidden on the Patient Level Report (PLR).
Protected Health Information. The Privacy Rule protects all "individually identifiable health information" held or transmitted by a covered entity or its business associate, in any form or media, whether electronic, paper, or oral. The Privacy Rule calls this information "protected health information (PHI).

De-Identified Health Information. De-identified health information neither identifies nor provides a reasonable basis to identify an individual. There are two ways to de-identify information; either: (1) a formal determination by a qualified statistician; or (2) the removal of specified identifiers of the individual and of the individual’s relatives, household members, and employers is required, and is adequate only if the covered entity has no actual knowledge that the remaining information could be used to identify the individual.
The patient level reports (PLR) contain either 3 or 4 tabs. PLR with 4 tabs:
• Summary
• ReadMe
• Numerator
• Denominator
PLR with 3 tabs
• Summary
• ReadMe
• Result

The intent of the patient level report is to provide detailed measure results to allow for the hospital to validate the process used to abstract the MMIS data and to calculate results. Not all data in the Patient Level Reports (PLR) is viewable by the hospital.
The summary tab displays the results of the measure.

</table>
The ReadMe tab contains descriptions of each tab as well as each field contained in the patient level report.
The denominator tab shows details for patients/events included in the denominator. **Please refer to the ReadMe tab for specific field descriptions.**
Rows are hidden when the qualifying event did not occur at the attributed hospital.

The numerator tab shows details for patients/events included in the numerator.
Some patient level reports contain a single result tab which includes both the numerator and denominator results. Column A identifies the patients included in the denominator and column N identifies the patients included in the numerator.
